

Dear Hiring Manager,

I am writing to express my strong interest in the Frontend Engineer position at Legatics. With over three years of experience building performant, scalable, and collaborative web applications using React, TypeScript, and GraphQL, I am excited by Legatics' mission to transform how legal transactions are managed globally. My professional journey at PayfiHQ, where I contributed to high-throughput web systems and GraphQL powered APIs, has equipped me with the technical foundation and team-oriented mindset to deliver user interfaces that are as intuitive as they are robust.

In my most recent roles, I have architected and optimized frontend applications that directly enhanced product usability and performance thereby reducing defect rates, improving response times, and enabling seamless collaboration between cross-functional teams. I have hands-on experience integrating GraphQL with Apollo, implementing reusable component libraries, and ensuring pixel-perfect responsiveness across platforms. I've worked in Agile environments, supported CI/CD practices, and contributed to scalable, accessible user interfaces, making me confident in adapting to Legatics' DevOps and microservices culture.

Beyond technical skills, I bring a detail-oriented and solutions-driven approach rooted in my engineering training and enriched by my collaborative spirit. Whether it's aligning features with product strategy, participating in sprint planning, or refactoring legacy components for better maintainability, I thrive at the intersection of code quality and user experience. I am deeply inspired by the legal-tech space and would be honored to contribute to a platform used by global legal leaders.

Thank you for considering my application and I look forward to the opportunity to join the Legatics team.

Yours sincerely,

Abdulsalam Khalifa O.
